

PRO

What is TrustDefender Pro?

TrustDefender Pro is an Internet security software solution downloaded to end-user computers. Bringing integrity back to the internet, it secures the Internet session solving the issues facing organisations where an increasing percentage of their customer base connects to online services for banking and ecommerce.

TrustDefender Pro is suited to the growing number of organisations looking to secure computers connecting remotely via the cloud or via VPN.

Why TrustDefender Pro is unique

TrustDefender Pro ensures the end-user's device is safe, secure and connecting to legitimate sites. TrustDefender Pro is browser and platform agnostic and works in real time providing organisations with instant decisioning capabilities when their customers connect.

TrustDefender checks the computer's health and security status; neutralising any malware that sits on the customers device which would have otherwise lead to fraud and identity losses.

In conjunction with TrustDefender Pro is the TrustDefender Central Intelligence Server. Deployed within the organisation, it works hand-in-hand with TrustDefender Pro and provides instant decisioning capabilities, audit and reporting for compliance and fraud monitoring. The TrustDefender Central Intelligence Server also performs integrity checks making sure all potential online risks are managed.

TrustDefender delivers these benefits:

- 1) Protects against customer identity and personal details being stolen.
- 2) Reduces fraud losses.
- 3) Improves customers' confidence online.
- 4) Allows the organisation to move faster with automatic enhanced controls and safeguards in place providing for instant decisioning.
- 5) Improves operational efficiencies for businesses.

TrustDefender looks after the user. If security issues are present, TrustDefender's "FixIt" intelligent helpdesk service gives instant feedback to the end-user on how to fix them.

TrustDefender supports businesses. If a potential problem is identified with a transaction, the instant decisioning process applies and lets the organisation make decisions in real-time based on this previously untapped information.

That's why organisations are deploying TrustDefender's technology as part of a layered strategy to meet online threats.

TrustDefender Pro is a very small and fast application to install. Supported on Macs and PCs, it works across all Internet browsers.
